February 28, 2014

To the HR manager, SSE,

I attach my CV in application to your talent pool.

I am currently studying part time on the Renewable Energy course at the Centre for Alternative Technology, while working full-time for a Chester based sustainable construction company. I am able to effectively divide my time between work and study, and am confident that I could do the same whilst working for your company. After February this year I would not have any commitment to the course until November 2014.

I have elected to specialise in wind power as this is my main area of interest within renewable energy. In February I will have completed the relevant wind energy module, so would be well placed to begin working in this field.

Prior to this course I attained a First Class Honours Degree in Mechanical Engineering from UMIST. I am committed to building on the knowledge and skills attained on this course and bringing it up to date whilst applying it to the increasingly important subject of renewable energy.

I have a full, clean driving license and have many years' experience of field based work and enjoy getting out on-site. I am an accomplished software user and can learn new packages quickly and effectively. Most notably I have experience of using WindFarmer and GIS software on the REBE course, as well as MS office and programming languages.

I have also worked in customer facing roles extensively and enjoy working and liaising with a range of people, from clients to suppliers and contractors, and thrive in a collaborative team based environment.

I look forward to hearing from you.

Yours sincerely,

Tom Eagle BEng
